

# Query the Pool

DeepBook V2 is now deprecated. Update your integrations to use [DeepBook V3](#) instead.

This section shows how to query the pool and order status.

For limit order, query its data using the following API functions

Function signature for query order info in Move contract

API functions to query the depth of level2 orders on both ask-side and bid-side.

Function signature for get depth of level2 order (ask side) in Move contract

We provide API function to list all open orders under one account

Function signature for list all open orders in Move contract

The API function to query the custodian account balance for users follows. Note that each pool has its own custodian account.

Function signature for query user balance in Move contract

## Order status

For limit order, query its data using the following API functions

Function signature for query order info in Move contract

API functions to query the depth of level2 orders on both ask-side and bid-side.

Function signature for get depth of level2 order (ask side) in Move contract

We provide API function to list all open orders under one account

Function signature for list all open orders in Move contract

The API function to query the custodian account balance for users follows. Note that each pool has its own custodian account.

Function signature for query user balance in Move contract

## Pool status

API functions to query the depth of level2 orders on both ask-side and bid-side.

Function signature for get depth of level2 order (ask side) in Move contract

We provide API function to list all open orders under one account

Function signature for list all open orders in Move contract
