

Sui Node Monitoring

These instructions are for advanced users. If you just need a local development environment, you should instead follow the instructions in [Create a Local Sui Network](#) to create a local Full node, validators, and faucet.

Nodes expose on localhost:9184/metrics by default.

You can view the metrics in the metrics UI, or you can use a tool like curl to get the metrics in a format that is easy to parse.

For production monitoring, we recommend using [Prometheus](#) and [Grafana](#) .

You can use grafana agent, grafana alloy, or another tool to scrape the metrics from your node.

Production monitoring

For production monitoring, we recommend using [Prometheus](#) and [Grafana](#) .

You can use grafana agent, grafana alloy, or another tool to scrape the metrics from your node.
