

DeepBook

DeepBook is a next-generation decentralized central limit order book (CLOB) built on Sui. DeepBook leverages Sui's parallel execution and low transaction fees to bring a highly performant, low-latency exchange on chain.

The latest development iteration of DeepBook is version 3 (DeepBookV3). [DeepBookV3](#) is currently available across all Sui networks. [DeepBookV2](#) is now deprecated. Merge any existing integrations to DeepBookV3.

DeepBook is open for community development. You can use the [Sui Improvement Proposals](#) (SIPs) process to suggest changes to make DeepBook better.
