

Module `std::bcs`

Utility for converting a Move value to its binary representation in BCS (Binary Canonical Serialization). BCS is the binary encoding for Move resources and other non-module values published on-chain. See <https://github.com/diem/bcs#binary-canonical-serialization-bcs> for more details on BCS.

Return the binary representation of `v` in BCS (Binary Canonical Serialization) format

Function

Return the binary representation of `v` in BCS (Binary Canonical Serialization) format

```
```bash
```

```
```
```

```
```bash
