Staking and Governance SDK

Examples of interacting with staking and governance. These functions typically require a balanceManagerKey , poolKey , or both. For details on these keys, see [DeepBookV3 SDK](#) . The SDK includes some default keys that you can view in the constants.ts file.

See [Staking and Governance](#) for more information on the staking and governance API.

Use stake to stake an amount you specify into a specific pool. The call returns a Transaction object.

Parameters

Use unstake to unstake from a particular pool. The call returns a Transaction object.

Parameters

Use submitProposal to submit a governance proposal. The call returns a Transaction object.

Parameters

Use vote to vote on a proposal. The call returns a Transaction object.

Parameters

The following examples demonstrate custom staking and governance functions that you can place into the DeepBookMarketMaker class.
